

Scientific Story Of the Elements: Adventures of Argon

There was once a young man by the name of **Argon**, he was **Germanium** and **Indium**.

Though he had never left his home town of **Californium**.

His adventures attitude pushed him to travel around the world to places like **Europium**.

But this was not enough of an experience he needed more.

So He signed up to travel the galaxy in the **Technetium** 5000, the fastest space craft in the universe.

So for the next ten years he travelled to **Plutonium** and **Neptunium**.

But then a chunk of **Mercury** flew right through the shuttle window making the smallest little death vacuum.

Argon jumped through the door but his shuttle mates **Rutherfordium** and **Einsteinium** were sucked out through the window.

So Argon had bit off more than he could chew and decided this was first grade boron (-yium), and the only way to save himself from a painful death was to explode the ship.

So he used all the **Nitrogen** and exploded the ship.

He may have loved to explore but now he had the **Radon** beat out of his corpse.

So the **Meitnerium** metals destroyed his body and that is the **Osmium** story of Argon the **Strontium**.
