

Covalent Bonds

By: Rachel, Joanna and Louise

I make atoms come together
They share their love for the better
I make Boron and Fluorine share 3 electrons
Who am I you say?
My name is Bond, Covalent Bond

I only like elements of the same gender
Metals are definitely not for me
Non-metal to non-metal is how it should be

Club Periodic is where we'll be
To the right of the staircase is for us VIPs

Instead of taking we like to share
After all it's all around us in the air

Our attraction is strong, it's hard to break
It's just like taking a fat kid away from his cake

If you're having trouble attracting and you've hit a wall
Never fear love is here
Give Mr. Bond a call,
Dial 6.02×10^{23}
And you'll see that he only charges an electron as the fee
